

NOTICE: Fiber Network Construction to begin in Scottsdale Ranch

Scottsdale Ranch residents will soon begin seeing construction activity related to the installation of a new fiber-optic internet network in the community. BAM Broadband, a locally based Arizona provider, is expanding its fiber-to-the-home infrastructure to bring faster and more reliable internet service to the community. To do so, BAM has worked with the City of Scottsdale and other communities to obtain permission to be in public rights-of-way, etc., working in compliance with City of Scottsdale requirements.

Fiber-optic technology delivers internet through glass fiber rather than traditional copper or cable lines which is said to provide significantly faster speeds, improved reliability, and support for the growing number of connected devices in today's households.

As construction begins, residents will notice BAM crews and equipment working along neighborhood easements and utility corridors. Before any digging takes place, Arizona's 811 utility locating service will mark existing underground utilities such as gas, electric, water, and sewer lines to ensure the work is completed safely. These temporary paint markings and flags help crews identify existing infrastructure and should remain in place until construction is complete.

Specialized equipment will then be used to install underground conduit that will carry the fiber-optic lines through the neighborhood. BAM works to minimize disruption during the installation process and will restore affected areas once construction is completed.

Before construction begins, residents will be notified via a letter from BAM, door hanger and via SRCA email blasts and website.

Residents who would like to learn more about the project or the fiber network can visit www.az.bambroadband.com for additional information.

SRCA does not have a say what utilities the city approves as along all public roadways is a utility easement.

Below is a map outlining the initial areas within Scottsdale Ranch where BAM plans to install.
